

On first authentication, a user is added to the database

user	
PK	<u>user_id: long</u>
	created: Instant
UK1	oath_key: String
UK2	display_name: String

Each user may have 0-to-many meetings recorded in the database

On completion of a meeting, the relevant details (including the zoom-meeting-id) are stored in the database.

zoom-meeting-id	
PK	<u>zoom_meeting_id: long</u>
	created: Instant
	started: Instant
	duration: long
	logins: int
FK1	user_id: long
